Barcode Locator

A complete system for Asset Tracking and monitoring of Equipment, Buildings and Plant

Overview

Barcode Locator is the asset management solution for small to medium-sized businesses, as well as being a fully expandable solution to solve the asset management needs of government, schools, hospitals and companies of all sizes. *Barcode Locator* will meet the asset management demands of your business while remaining simple and easy to use. If you're currently using a pen and paper or a spreadsheet, *Barcode Locator* will reduce costs and improve efficiency by automating your asset management process.

Features

The system can handle many different item types at the same time. So equipment, buildings, files, archive boxes, plant and machinery can all be entered and grouped under their own category headings.

Barcodes

The system is designed to work with barcodes to provide fast and accurate data entry. The system will work with any Windows Mobile or CE device and will drive a wide variety of Thermal Transfer printers to produce asset labels.

Issue and Return of items

Single Scans enable fast recording of loans and issues of items to staff or clients. The time and date of the loan and the new keeper of the item is recorded and displayed in an Outstanding Loans report.

Multiple views of the data

The items can be viewed by location, by item type, by budget holder or department, by keeper or by supplier.

Fast Search

Multiple field searches with wild cards and lookups provide instant tracing of an item and its location and keeper.

Drill down to item detail

All views of the list of items can be expanded to reveal an increasing amount of detail.

Item History record

All item movements and audits are recorded in the transaction history, providing a detailed log of what has happened to an item.

Disposals

Provisional disposal dates can be allocated to each item as it is entered on the system to ultimately provide schedules of items for disposal.

keeping you on the right lines

Audit Schedule

The barcoded audit schedules provide a list of what needs checking when the next audit date falls due.

Reports

All reports provide a search facility and can also export to many file formats.

Importing Existing Data

Existing data can be imported to save manual re-entry.

Condition Monitoring

Log the condition of items as they are audited

Applications

- * Office equipment tracking and maintenance
- * Files and boxes archiving
- * Machinery maintenance
- * Building maintenance
- * Engineers tools - Issues and loans
- * Company vehicles, mobile phones, laptops etc
- * Relocation, Removals and Storage - item tracking
- * Hospital equipment tracking and maintenance
- * Plant and tool hire and maintenance records
- * Item recording for insurance purposes
- * Art collections, museum collections. Tracking movements
- * Film equipment tracking
- * Sports centre equipment issues and loans
- * Software licence recording and tracking
- * Health and Safety Check Recording
- * Fire protection equipment installation and maintenance recording
- * Security alarm installations and maintenance recording

System Requirements

2 Free USB ports

Windows XP with 200mb disk space and 512kb RAM.
